

Spring 2016 edition

Honey and Moringa in Madibeng

Honey Nectarous CC was established by Mr Job K Betha and has been in operation for the past 9 years. The company is based in NWDC's Madibeng Industrial Park in Brits.

Honey Nectarous CC produces products such as pure honey, mixtures of honey and cinnamon, honey wax and moringa products.

Humble beginnings

For 17 years Mr Betha was employed by a beekeepers and honey processing company, which sadly closed down in 2007, leaving him unemployed.

This led him to start his own business. It all started with two buckets of processed raw honey which was delivered to a specific customer. After that, Honey Nectarous CC's telephone never stopped ringing for orders.

A thriving business

Honey Nectarous now services over 100 active hives which aims to double by the end of the year 2017. Although they are still buying and selling honey from other Beekeepers, it is encouraging that they also produce from their own hives. The company has also won a number of SMME awards.

It is found that a mixture of honey and cinnamon cures diseases such as fatigue, arthritis, cancer and much more.

The powdered honey and cinnamon product is highly recommended for treatments such as skin acne, weight loss, immune booster, colds, bladder infections, longevity, upset stomach, influenza and hair loss.

The Moringa tree is called the miracle tree because of its healing power. This tree can be used for different

medicinal purposes. Honey Nectarous only uses the most powerful ripe moringa leaves to make their mixtures which have great health benefits.
