## **1. INTRODUCTION**

The purpose of the Research and Development Unit is to gather, analyse and disseminate verified, reliable and relevant economic data, intelligence and research for the benefit of users to support informed decision making.

The performance indicators of the unit are:

- A Quarterly Economic Data Report
- Percentage achievement on the Annual Research and Innovation Activity Plan.

Economic data or economic statistics may refer to data (quantitative measures) describing an actual economy, past or present. These are typically found in time-series form, that is, covering more than one time period (say the monthly unemployment rate for the last five years) or in cross-sectional data in one time period (say for consumption and income levels for sample households). Data may also be collected from surveys of for example individuals and firms or aggregated to sectors and industries of a single economy or for the international economy. A collection of such data in table form comprises a data set.

The purpose of this report is to supply an overview of the economic data and information gathered and shared from a global, South African, African and North West provincial perspective in order to ensure that recent, relevant and reliable economic data supports NWDC and other client and stakeholder decisions and activities.

The economic data report will be structured as follows: First a macro-economic overview taking a global perspective in terms of developed and emerging economies moving to South Africa and the North West province. Secondly subjects that have an impact on the economy and relevance to NWDC will be covered including the Global Competitiveness, Foreign Direct Investment and Trade.

## **2. MACRO ECONOMIC OVERVIEW**

### **2.1 The Global Economy – Uncertainty in the Aftermath of the U.K. Referendum**

(Source: WORLD ECONOMIC OUTLOOK (WEO) UPDATE; July 2016)

The baseline projection for global growth in 2016 is a modest 3.1 percent, a 0.1 percentage point downward revision relative to the April 2016 World Economic Outlook Update and -0.3 from January 2016, however severe consequences of Brexit can result in a further -0.3 percentage point downward revision. The recovery is projected to strengthen in 2017 and beyond, driven primarily by emerging market and developing economies. The fragile conjuncture increases the urgency of a broad-based policy response to raise growth and manage vulnerabilities.

- Before the June 23 vote in the United Kingdom in favor of leaving the European Union, economic data and financial market developments suggested that the global economy was evolving broadly as forecast in the April 2016 World Economic Outlook (WEO). Growth in most advanced economies remained lackluster. Prospects remained diverse across emerging market and developing economies, with some improvement for a few large emerging markets—in particular Brazil and Russia—pointing to a modest upward revision to 2017 global growth relative to April's forecast.
- The outcome of the U.K. vote, which surprised global financial markets, implies the materialization of an important downside risk for the world economy. As a result, the global outlook for 2016-17 has worsened, despite the better-than-expected performance in early 2016. This deterioration reflects the expected macroeconomic consequences of a sizable increase in uncertainty, including on the political front. This uncertainty is projected to take a toll on confidence and investment, including through its

repercussions on financial conditions and market sentiment more generally. The initial financial market reaction was severe but generally orderly. As of mid-July, the pound has weakened by about 10 percent; despite some rebound, equity prices are lower in some sectors, especially for European banks; and yields on safe assets have declined.

- Brexit-related revisions are concentrated in advanced European economies, with a relatively muted impact elsewhere, including in the United States and China. Pending further clarity on the exit process, this baseline reflects the benign assumption of a gradual reduction in uncertainty going forward, with arrangements between the European Union and the United Kingdom avoiding a large increase in economic barriers, no major financial market disruption, and limited political fallout from the referendum.

## The World Economic Outlook Projections as per the World Economic Outlook Update July 2016

**Table 1. Overview of the World Economic Outlook Projections**

(Percent change unless noted otherwise)

	YEAR OVER YEAR						Q4 OVER Q4		
	Estimates		Projections		Difference from April 2016 WEO Projections <sup>1/</sup>		Estimates		Projections
	2014	2015	2016	2017	2016	2017	2015	2016	2017

Source: IMF, World Economic Outlook Update, July 2016

Note: Real effective exchange rates are assumed to remain constant at the levels prevailing during June 24–June 28, 2016. Economies are listed on the basis of economic size. The aggregated quarterly data are seasonally adjusted.

1/ Difference based on rounded figures for both the current and April 2016 WEO forecasts.

2/ Countries included in the calculation of quarterly estimates and projections account for approximately 90 percent of world GDP at purchasing power parities.

3/ Excludes the G7 (Canada, France, Germany, Italy, Japan, United Kingdom, United States) and euro area countries.

4/ For India, data and forecasts are presented on a fiscal year basis and GDP from 2011 onward is based on GDP at market prices with FY2011/12 as a base year.

5/ Indonesia, Malaysia, Philippines, Thailand, Vietnam.

6/ Simple average of growth rates for export and import volumes (goods and services).

7/ Simple average of prices of U.K. Brent, Dubai Fateh, and West Texas Intermediate crude oil. The average price of oil in U.S. dollars a barrel was \$50.79 in 2015; the assumed price based on futures markets (as of June 28, 2016) is \$42.9 in 2016 and \$50.0 in 2017.

8/ Excludes Argentina and Venezuela

## 2.2 South African Realities

As per the World Economic Outlook of June 2016 the baseline projection for growth for South Africa is 0.1 percent a 0.5 percentage point downward revision relative to the April 2016 World Economic Outlook Update and -0.7 from January 2016. The Reserve Bank announced in July that they expect the South African Economy to grow by 0% in 2016

### Brexit

(Source: South African Institute of international Affairs; June 2016)

Brexit is the term used for the exit if Britain from the EU that was determined by the outcome of a referendum in Britain on 23 June 2016. It is an international event that will have profound consequences for the UK's status as a financial centre and gateway to the European Union (EU), for its trading relations with the world, and for its global influence.

This will have an impact on South Africa as the UK comprises 3.7% of South Africa's global trade. UK remains both an important source and destination for South African investment, representing 45.6% of direct investment in South Africa and 10.9% of SA's global direct investments.

We have no control over the outcome of the referendum, and there is little we can do to limit the impact on our economy. However, our vulnerability to such external risks should make us even more aware of the

importance of creating predictability in our broader policy frameworks, sticking to our belt-tightening, and enabling the private sector to create jobs.

### 2.2.1 Highlights Q2 2016/2017

In this section the key quarterly indicators will be mentioned including economic growth, inflation and employment.

- South African Economic Growth Q2 2016/2017

**Figure 1: South Africa Gross Domestic Product Growth**

(Source: Statssa Q2 2016)

#### Quarter 1 2016 2017

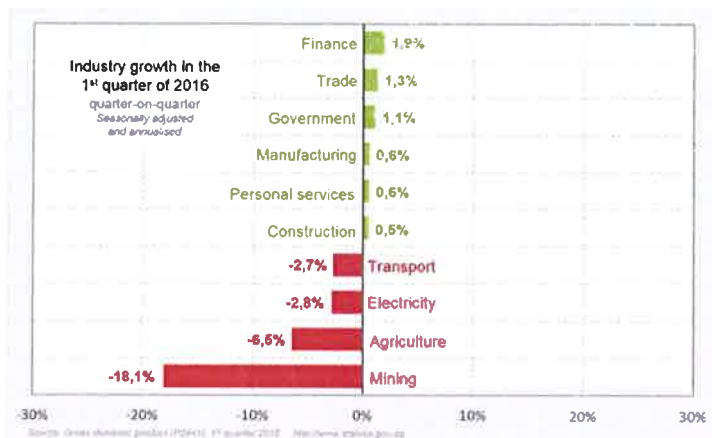

The South African economy slides in the first quarter due to a sharp contraction in mining that tipped economic growth into negative territory in the first quarter of 2016. South Africa's economy shrank by 1,2% quarter-on-quarter (seasonally adjusted and annualised), according to the gross domestic product (GDP) figures published by Stats SA. Year-on-year growth for the same quarter was -0,2%.

The supply side of the economy: transport joins agriculture in recession

The mining industry contributed the most to the 1,2% quarter-on-quarter fall. Lower production in the mining of 'other' metal ores, largely platinum group metals and iron ore, saw the industry contract by 18,1%.

**Figure 2: South Africa Industry Growth in the 1<sup>st</sup> Quarter of 2016 Quarter on Quarter**

(Source: Statssa Q2 2016)

If mining is excluded from the picture and non-mining growth is measured, the economy would have experienced growth of 0,5% instead of -1,2%.

The impact of adverse weather continued to plague agriculture as the industry recorded its fifth consecutive quarter of negative growth. Agricultural production has fallen by 14% since the fourth quarter of 2014.

The slowdown in mining and agriculture has had a knock-on effect on industries further along the production chain. Lower demand for energy, especially from mining, saw the electricity industry contract by 2,8%.

The transport industry recorded its second consecutive quarter-on-quarter fall in activity, now joining beleaguered agriculture in recession territory. A fall in demand for freight and passenger land transportation contributed to the decline.

#### Quarter 2 2016 2017

The GDP figure for the (2nd quarter 2016 is 3,3% q/q )

*Gross domestic product (measured by production)*

South Africa's gross domestic product (GDP) growth rate was 3,3% in the second quarter of 2016.

The main contributors to the GDP growth rate were the manufacturing industry and the mining and quarrying industry. Manufacturing increased by 8,1%, largely as a result of higher production in petroleum, chemical products, rubber and plastic products; and motor vehicles, parts and accessories and other transport equipment. Mining and quarrying grew by 11,8%, largely as a result of higher production of platinum group metals.

Only two industries contracted in the second quarter, namely agriculture, forestry and fishing (-0,8%); and electricity, gas and water (-1,8%). The agriculture, forestry and fishing industry has been in decline for six consecutive quarters.

*Expenditure on GDP*

Expenditure on real gross domestic product grew by 3,4% in the second quarter of 2016.

NWDC Economic Data Report. Qtr 2 of 2016.2017 [www.nwdc.co.za](http://www.nwdc.co.za)

[Back to Table of Contents](#)

Household final consumption expenditure increased by 1,0% in the second quarter. The main sources of the increase were miscellaneous goods and services and health services.

Government final consumption expenditure increased by 1,3%.

Gross fixed capital formation decreased by 4,6%. The main contributors to the decline were construction works and machinery and other equipment.

There was a R23 billion drawdown of inventories in the second quarter (following a R1 billion build-up in the first quarter), which contributed -3,2 percentage points to total growth.

Net exports contributed positively to total expenditure on GDP. Exports increased by 18,1%, mainly because of higher exports of precious metals and vehicle and transport equipment. Imports decreased by 5,1%, mainly because of lower imports of machinery and electrical equipment.

The GDP estimates are preliminary, and may routinely be revised on the basis of additional evidence that has become available by the time the subsequent quarter's estimates are released.

Considering the current situation against the previous year's GDP performance puts the performance into context.

Figure 3: How did South Africa's economy perform in 2015

(Source: Statssa Q2 2016)

South Africa's economy grew by 1,3% in 2015, down from 1,5% in 2014 and 2,2% in 2013, according to preliminary estimates of real gross domestic product (GDP) published by Stats SA. Overall economic growth in 2015 was

characterised by two of the main industry groups shrinking in size, while the other eight experienced some growth.

The main contributor to the slowdown in 2015 was agriculture. Severe drought conditions saw the industry contracting by 8,4%, the largest annual fall in agriculture production since 1995. The decrease in 2015 was mainly due to a sharp drop in the production of field crops.

The electricity, gas and water supply industry also shrank in size, contracting by 1,0%. Growth in manufacturing was almost flat in 2015, with the industry expanding marginally by 0,1%. Growth figures of less than 2% were recorded for government (+0,9%), personal services (+1,1%), transport<sup>2</sup> (+1,4%), trade<sup>3</sup> (+1,4%) and construction (+1,9%).

The finance industry expanded by 2,8%. As this is the largest industry, comprising 21% of the entire economy, its increase in activity was the main positive contributor to the 1,3% annual rise in GDP.

The mining industry recorded the highest growth of all ten industries, expanding by 3,0%. The increase was mainly a result of increased platinum group metal (PGM) production. The low base created in 2014 by the PGM miners' strike saw PGM production rising by 46,2% in 2015 compared with 2014. Of the four major minerals (i.e. PGMs, iron ore, gold and coal), the PGM group was the only one to record a production increase in 2015.

GDP is widely used to measure the size of an economy and its performance over time. In 2015 South Africa's GDP was almost R4 trillion (that's 12 zeros).

Other quick facts for the fourth quarter of 2015 are:

- Real GDP increased by 0,6% quarter-on-quarter, seasonally adjusted and annualised.
- The unadjusted real GDP increased by 0,6% year-on-year.

(Source: Statistics SA Q3 2015)

#### **Inflation Consumer Price Index (CPI)**

The Average CPI for 2015 was 4,6%

**Figure 4: South Africa's Consumer Price Index (CPI) May 2015 to Jul 2016**

(Source: Statssa Q2 2016)

Key findings: P0141 - Consumer Price Index (CPI), February 2016

- The headline CPI (for all urban areas) annual inflation rate in February 2016 was 7,0%.
- This rate was 0,8 of a percentage point higher than the corresponding annual rate of 6,2% in January 2016.
- On average, prices increased by 1,4% between January 2016 and February 2016.

Key findings: P0141 - Consumer Price Index (CPI), July 2016

- The headline CPI (for all urban areas) annual inflation rate in July 2016 was 6,0%.
- This rate was 0,3 of a percentage point lower than the corresponding annual rate of 6,3% in June 2016.
- On average, prices increased by 0,8% between June 2016 and July 2016.

#### **South Africa's CPI reveals how volatile inflation hurts the poorest**

Patrick Kelly, Executive Manager for Price Statistics, provides some insights into how inflation affects the most vulnerable.

The combined effect of the severe drought and the depreciation of the rand drove annual food inflation to 9,8% in March, its highest level in four years. Periods of high food inflation often spark an outpouring of concern over its impact on the poor.

Usually the intention of such analysis is to advocate for increased welfare benefits for the poor. These concerns are not without foundation, as food makes up more than 40% of the poor's overall expenses – a greater proportion than any other income group. Other large components which make up a poor family's expenses are housing, alcohol and tobacco and transport. Price changes in these categories also affect their living standards.

The Consumer Price Index (CPI) is sometimes incorrectly cited to illustrate how official statistics fail to capture the experience of the poor. South Africa's national inflation rate, in line with most equivalent measures around the world, is based on the total expenditure of all South African consumers. Because higher earners spend more, they implicitly exert greater influence on the overall CPI basket. With the knowledge that the CPI better reflects the working or middle class, rather than the poor, Stats SA publishes numerous additional price indices to analyse changes in the cost of living of specific income and geographic groups.

The CPI is based on scientifically representative surveys of households and prices and therefore provides a trustworthy basis for measured analysis. While the products in the CPI basket are standardised, the importance (weight) attached to each of these varies according to the particular index being constructed. Additional indices are compiled for specific income groups, provinces, small and large urban areas as well as rural areas. The prices for each geographic area, including the rural CPI, are collected in the area in which each particular product is usually purchased.

It is true that in times of high food inflation, the poor experience higher overall inflation than the average consumer and that inflation of the poor's food basket increases more rapidly than that of all other groups. However, the inverse is true during times of low food inflation. In these periods, food baskets of rural residents and the poorest quintile show markedly slower inflation than all other groups. This relationship is found in 90% of the months from January 2008 to March 2016, with accumulated inflation of the poor since 2013 (when the CPI was last rebased) currently being only fractionally higher than headline inflation.

As an illustration of this pattern, while headline annual food inflation was 9,8% in March this year, it was 13,6% for rural residents and 11,8% for the poorest households. However, in May 2015 when the headline food inflation figure was 4,6%, rural residents paid 2,8% more for food and the poor 3,8% more. The poor therefore experience greater variability in inflation, with high inflation periods – leading to more financial stress – but low inflation periods providing a relative measure of relief. In the long run, both the food and total inflation experienced by the poor and rural residents is approximately equivalent to the country as a whole. This would suggest that short term, targeted, relief measures during high inflation periods are more needed than additional permanent welfare interventions.

Households change their spending patterns over time in response to a variety of factors, including changes in prices, product availability, technology, income and tastes. In particular, buying down to cheaper varieties and smaller package sizes is common during high inflation periods to manage overall spend. This substitution mitigates the impact of price rises. Because Stats SA only updates the CPI weights every three to five years, short-term substitution is not captured and will result in the CPI being higher than the actual inflation experienced by households. This is in contrast to the perception held by many that the CPI typically underestimates inflation.

Updating the CPI basket and weights as often as possible is therefore critical to arrive at an accurate inflation rate. The weights of the CPI currently reflect spending patterns from 2012. Spending patterns of households across the country were surveyed last year and these results will lead to a new basket and also new weights from the beginning of 2017. This survey is expensive to conduct because it must account for expenditure covering a whole year and is more complex than other household surveys. Its value is not only in updated weights for the CPI, it also provides insights into the living conditions and poverty levels of South Africans – a robust measure of the impact of changing prices and economic conditions.

(Published in Daily Maverick on 28 April 2016)

### **Production Price Index (PPI)**

Another important price index is the production price index (PPI). Whereas the consumer price index (CPI) measures the cost of a representative basket of goods and services to the consumer, the PPI measures prices at the level of the first significant commercial transaction. For example, the prices of imported goods are measured at the point where they enter the country and not where they are sold to consumers. Likewise, manufactured goods are priced when they leave the factory, not when they are sold to consumers.

Another important feature of the PPI is that it includes capital and intermediate goods (excluded from the CPI), excludes VAT (included in the CPI) and excludes services (which account for 45% of the CPI basket). The PPI is therefore based on a completely different basket of items than the CPI.

The PPI, which is also estimated and published on a monthly basis by Statistics South Africa, measures the cost of production rather than the cost of living. Unlike the CPI, the PPI therefore cannot be related directly to consumers' living standards. The PPI is nevertheless very useful in the analysis of inflation. Because it measures the cost of production, a significant change in the rate of increase in the PPI is usually an indication that the rate of increase in the CPI will also change a few months later.

The methods used for calculating the rate of increase in the PPI are the same as the methods used for calculating an inflation rate based on the CPI.

The Average PPI for 2015 was 3.6%

**Figure 5: South Africa's Production Price Index (PPI) April 2015 to Jul 2016**

(Source: Statssa Q2 2016)

**Figure 6: South Africa's Consumer Price Index (CPI) and Production Price index (PPI) May 2015 to Jul 2016**

(Source: Statssa Q2 2016)

## Population

The Population of South Africa was estimated at 54.00 mil at Mid 2014 and 54.95mil at Mid 2015  
(Source: Statssa)

## Employment

Employment contracted by 0,8% in the second quarter of 2016

Employment declined in the second quarter of 2016 by 129 000 to 15,5 million. The quarterly decline in total employment was driven by job losses in Services (127 000 or 3,5%), Agriculture (44 000 or 5,0%), Transport (39 000 or 4,4%) and Mining (24 000 or 5,1%). Quarterly employment gains were observed in Manufacturing, Private households and Construction. While Manufacturing created 67 000 jobs quarter-to-quarter the number of employed in this industry was lower compared to the same period last year (45 000 or 2,5%). Formal sector employment declined for two successive quarters to 10,9 million in Q2: 2016 but was still 0,8% higher compared to the same period last year. The informal sector contracted by 58 000 or 2,3% in Q2: 2016, however this is 5,8% lower compared to the same period last year.

Unemployment declined by 90 000 in Q2: 2016 which led to a quarterly decline in the unemployment rate by 0,1 of a percentage point to 26,6%, however during the same period the level of inactivity increased by 379 000. This implies that those who lost jobs moved into inactivity rather than into unemployment, or that those who were previously looking for work stopped doing so. Free State and Gauteng reported the highest unemployment rate at 32,2% and 29,5% respectively. However both provinces are among the top 3 with the highest proportion of the working age population who are employed.

The expanded unemployment rate which includes those who did not look for work but were available to work during the reference period increased by 0,1 of a percentage point to 36,4% in Q2: 2016.

Youth (15-34 years) and persons without matric remain vulnerable. Youth unemployment rate remained high at 37,5%. There was approximately 3,2 million young persons aged between 15-24 who are not in employment,

education or training. This is 31,2% of those aged 15-24 years. Persons without matric account for 58,3% of the unemployed and their unemployment rate was 31,0% in Q2: 2016.

**Figure 7: South Africa and North West Unemployment Rate**

(Source: Statssa Q2 2016)

### 2.2.2 The following structural transformation in the economy is needed

Rise in agricultural sector productivity

Stronger links with manufacturing sector

Skills development

Labour shift from low-productive agricultural sector to higher productive manufacturing sector

Worker income increases

Poverty levels drop, income distribution improves

Country production base broadens

Economic diversification into high tech manufacturing and services

### 2.2.3 South Africa's sustainability "hope": National Development Plan (NDP)

The NDP is South Africa's long term plan to 2030 and might be the sustainability 'hope' of the country. It seeks amongst other things to reduce unemployment by improving manufacturing. The NDP will also result in a change in the risk for labour unrest by reducing it.

The New Growth Path, which is a short term plan drawing from the NDP goes into detail with the work that has to be done and sets a target of creating 5 million jobs in 10 years. It identifies inter alia: The mining value chain, with a particular emphasis on mineral beneficiation as well as on increasing the rate of mineral resource extraction as key activities to stimulate growth

The following issues must be addressed as per the NDP:

- Boost educational levels.
- Promote industries that are labour-absorbing, such as mining, agriculture, construction, hospitality and small businesses.
- Grow the more advanced sectors of the economy, such as manufacturing, parts of financial services, telecommunications and businesses services.
- Provide a social wage to enable the poorest of South Africa's people to have a decent standard of living and to build their capabilities to get better jobs, higher incomes and a broader range of benefits.
- The NDP seeks to place the economy on a production-led trajectory.

## 2.3 North West Province Economic Overview

### 2.3.1 North West Key Economic Indicators Compared to South Africa

The table below summarises the *key demographic and socio-economic characteristics* for the NWP and its four district municipalities' in context of the South African picture with regards to demographics, development, household infrastructure, labour, income and expenditure, economy, tourism and international trade as per the 2015 IHS Global Insight Indicators.

The NW region covers approximately 105 076 square kilometres, comprising 8.6% of the national area. The NWP is not densely populated when compared to the national population density. The NWP houses approximately 7% of the country's total population.

The NW shows improvement in most of the *developmental indicators* (2009 used as baseline). Most notable is the improvement in the Human Development Index (HDI) currently at 0.62 up from 0.58 in 2014 and from 0.52 in 2009. Similar improvements are seen in both the number and percentage of people living in poverty below the upper poverty line (StatsSA defined), currently measured at 44.5% from 47.4% in 2014 (59.1% in 2009) respectively. Improvements in all measures relating to schooling and education are also reported.

The *Index of Buying Power* has also increased for the NW province. IHS Global Insight's Index of Buying Power (IBP) indicates that 5% of the country's spending power is located in the NW. Income levels in the NWP are below the national average (which is to be expected for the more rural areas in South Africa). The unemployment rate is slightly lower than that of the national average, while the percentage of people living in poverty is marginally higher than the national average. The NWP has a share of approximately 10.8% of national employment.

The 2015 *Gini coefficient* indicates that the level of equality is decreasing from 0,602 in 2009 to 0.614 in 2014 and 0.62 in 2015 or the North West province. This is a trend for South Africa and the District Municipalities as well.

With regards to the economy, the *Tress index* provides insight into the level of concentration (or diversification) within an economic region. A Tress index value of 0 means that all economic sectors in the region contribute *equally* to GVA, whereas a Tress index of 1 means that only one economic sector makes up the whole GVA of the region. In the table below it is clear that the NW province has become more diversified in its economy from 2009 where it was the 2<sup>nd</sup> most concentrated economy and in 2014 the 4<sup>th</sup> most concentrated. This is an indication that the efforts to diversify the economy are paying off and can be contributed to the weaker performance of the mining sector. *The NWP is a large and significant local economy in the South African economic context.* The area contributes approximately 5.7% to national production with mining,

**Table 3: Comparison of the Tress indices of SA, provinces and the NW district Municipalities between 2009 and 2015:**

The Average Annual growth rate for the Bokone Bophirima Province has clearly improved from the 2014 figures.

Figure 8: GVA-R Average annual growth (Constant 2010 Prices)

Source: IHS Global Insight: Regional eXplorer 993 (2.5v)

In the graph below the average annual growth of the Bokone Bophirima Province is compared with the national growth figures as well as with Gauteng, Limpopo and Mpumalanga and it is clear that the Bokone Bophirima Province growth is more volatile which can be attributed to the heavy reliance on mining.

Figure 9: Average Annual Growth South Africa, Bokone Bophirima, Free State, Gauteng, Limpopo and Mpumalanga

Source: IHS Global Insight: Regional eXplorer 993 (2.5v)

According to the *Regional Economic Review: Current realities in the North West Province, A report from the TRADE (Trade and Development) research niche area of the North West University; March 2014*, the provincial economy is structurally unbalanced with the primary and tertiary sectors contributing more towards GDP-R and growing faster than the secondary sector. The situation is further exacerbated by;

- limited water and electricity supply,
- the poor state of infrastructure,
- shortage of skilled labourers and
- rigid regulatory and legislative policies.

A provincial input-output analysis points to a situation of high economic leakages and a dislocation of supply and demand across a number of industries. This has resulted in input and output activities between industries not operating in tandem, minimising the competitiveness of the province.

## Employment

### 2.3.2 North West Location and Infrastructure

Location is one of the NWP's greatest natural advantages. The main Cape Town to Zimbabwe railway line runs through the provincial capital of Mahikeng, linking the NWP to several southern African countries, including Angola, Zambia and Botswana. An extensive road network connects the major commercial centres of the province to the rest of the country via a network of 1 785 km of national roads. The vital east-west corridor links the eastern Africa seaboard at Maputo to the western African seaboard at Walvis Bay, running through the NWP en-route. Its strategic positioning has been further improved with the completion of the Trans Kalahari Corridor through Botswana and Namibia – and these developments bode well for a thriving business and tourism economy. In terms of airports, Mahikeng has an established airport with one of the longest runways in the world and Pilanesberg (near Sun City) also has an international airport, primarily servicing the tourism industry.

Water is considered one of the key limiting factors to development in the NWP. The province is not only depleting its precious water reserves, but suffers from an additional problem – that of pollution of groundwater caused by both natural and human-induced factors including mining and industrial activities, agriculture and domestic use. With regards to electricity, the NWP has a well-developed electricity distribution network due to mining activities. The current electricity crisis can also be seen as an opportunity to develop other energy technologies and to invest in renewable energy.

### 2.3.3 North West Policy Guidelines

Given the economic growth forecasts, key demographic and socio-economic characteristics and the current economic and structural realities in the North West, the NWPG has an important role to play in setting the

framework for growth and outlining the necessary actions to stimulate growth in areas such as innovation, research and development, skills, education, exports, FDI and entrepreneurship. This also means identifying and supporting business growth in areas where there is the greatest potential, whilst ensuring that the necessary economic infrastructure is in place to capitalise on the existing strengths and opportunities.

With the Focus of the 5<sup>th</sup> Administration on rebranding, repositioning and renewing (RRR) the VTSDs' economies as a strategic drive and to further focus on Agriculture, Culture and Tourism (ACT) as key sectors in the province. As the implementing arm of the NW province this approach will be promoted by the NWDC.

It is important to indicate the relative importance of agriculture, culture and tourism in the NWP. Agriculture (both narrow [2.8%] and broad [4.4%]) plays a smaller role than in most of the other provinces (with the exception of Gauteng and Limpopo). Along with most other provinces, except Gauteng, the cultural sector makes up a small part of GVA (2.7%). Culture and Tourism is difficult to isolate as it is spread across various sectors in the economy. The tourism sector contributes more (19%) to provincial GVA than agriculture and culture put together. In the total NWP economy ACT contributed approximately 23% of all value added in 2014.

**Table 8: ACT Sectors contribution to provincial GVA and Employment 2014**

Detailed sectors	Share of provincial GVA	Share of provincial employment
Narrow agriculture	2.77%	4.85%
Broad agriculture	4.40%	6.78%
Culture	2.71%	3.60%
Tourism	19.01%	18.82%

Source: IHS Global Insight: Regional eXplorer

In terms of the VTSD focus, the areas / places identified as key role players are indicated in the table below.

**Table 9: Places identified as key focus areas**

Category (VTSD)	Local Municipality (LM)	District Municipality (DM)
Zeerust	Ramotshere Moiloa LM	Ngaka Modiri Molema DM
Coligny	Ditsobotla LM	Ngaka Modiri Molema DM
Delareyville	Tswaing LM	Ngaka Modiri Molema DM

Source: The FEED (2015).ACT

The Department of Finance, Economy and Enterprise Development (FEED) mapped the following priorities in their 2015 2016 strategic plan to grow the economy of the NWP.

**Table 10: (FEED) mapped the following priorities in their 2015 2016 strategic plan to grow the economy of the NWP.**

Heading	Content
<b>1 Low Agricultural Outputs</b>	Whilst the employment numbers in the sector have increased with accompanying increased output, there's a need for further upward development for purposes of production, employment figures and agro-processing
<b>2 Infrastructure Development</b>	The Province needs to provide and maintain a solid economic infrastructure, including a reliable energy consumption grid, transport networks (road, rail, and aviation), and telecommunications
<b>3 Diversification of Industries</b>	The Bokone Bophirima Province has to move with global trends. This calls for a thrust towards diversified local economies to include Arts and Crafts, Culture, Film industry, Green Economy industries (e.g. solar energy, waste management, and recycling projects)
<b>4 Manufacturing vs Export Oriented Market</b>	There is a need to investigate the potential of local beneficiation opportunities (based on the local outputs) and actively promote closer linkages between the local primary sector and manufacturing industries
<b>5 Aggressive Enterprise Development</b>	SMMEs are regarded as the back bone of many economies in developed and developing countries yet South Africa remains at the bottom of the rankings when it comes to countries that support small businesses to buttress the performance of their economies. To the extent that RSA has poor records on SMME support the implications are that provinces are not doing any better. The SMME strategy covers most of the challenges and plans to overcome them and therefore it suffices to mention Small Business Support as a challenge in this document
<b>6 Foreign Direct Investment</b>	The Bokone Bophirima Province has the potential to attract foreign investment to support the local economies. The potential exists to attract local and foreign private investors to the province by providing a competitive set of incentives that could include both administrative (reducing the time required for development approval, information provision, etc.) and financial incentives disaggregated in terms of economic sectors and the value of investment particularly prioritising beneficiating activities. This can also be done through the formation of Public Private Partnerships (PPPs) to reduce private sectors' risks and acquire necessary funds for investment

The North West Development Corporation (NWDC) has identified the following key and cross-cutting sectors, based on the renewed focus in the NWP

Key economic sectors include:

- Agriculture and agro-processing
- Culture
- Tourism
- Mining and mineral beneficiation
- Manufacturing
- Green economy

- ICT

Cross-cutting sectors include:

- Small and medium enterprise (SME)
- International trade
- Innovation and R&D
- Business process outsourcing (BPO)

Based on the information above NWDC will close the gap by focusing on smart specialization. Smart specialization is about placing greater emphasis on innovation and having an innovation-driven development strategy in place that focuses on each area's strength and competitive advantage. It aims at identifying factors of competitiveness and concentrating resources on key priorities. It also aims to harness area diversity by avoiding uniformity and duplication in investment goals. It combines goal-setting with a dynamic and entrepreneurial discovery process involving key stakeholders from government, business, academia and other knowledge-creating institutions.

### 3. SOUTH AFRICA'S GLOBAL COMPETITIVENESS

The Global Competitiveness Report 2014 – 2015 by the World Economic Forum's (WEF) assesses the competitiveness landscape of 144 economies, providing insight into the drivers of their productivity and prosperity and measures over 100 indicators. South Africa ranked no 56 in 2014 down from 53 in 2013.

Positive rankings include:

- Quality of its institutions (36th),
- Including intellectual property protection (22nd),
- Property rights (20th),
- Efficiency of its legal framework in challenging and settling disputes (ninth and 15th, respectively),
- Accountability of private institutions (2nd )
- Financial market development remained impressive at seventh place, although their data pointed to "more difficulties" in all channels of obtaining finance
- Efficient market for goods and services, business sophistication and innovation, benefiting from good scientific research institutions, and strong collaboration between universities and the business sector in innovation were also identified as points supporting competitiveness.

Challenges include:

"South Africa's strong ties to advanced economies, notably the euro area, have made it more vulnerable to the economic slowdown of those economies," the WEF said.

These ties were identified as likely contributors to the deterioration of fiscal indicators in South Africa, including macroeconomic environment performance which dropped sharply in this year's index.

- Diversion of public funds,
- Perceived wastefulness of government spending,
- General lack of public trust in politicians
- Health of the workforce — at 132nd as a result of high rates of communicable diseases
- Higher education and training,
- Labour market efficiency
- Labour-employer relations (144<sup>th</sup>)

"Raising education standards and making its labour market more efficient will thus be critical in view of the country's high unemployment especially youth.

### THE IMD WORLD COMPETITIVENESS SCOREBOARD

NWDC Economic Data Report. Qtr 2 of 2016.2017 [www.nwdc.co.za](http://www.nwdc.co.za)  
[Back to Table of Contents](#)

The IMD World Competitiveness Scoreboard 2015 by the Institute for Management Development in Zurich (IMD) assesses the competitiveness landscape of 61 economies, providing insight into the drivers of their productivity and prosperity. South Africa ranked no 53 in 2015:

Positive rankings include:

- Cost-of-living index (1)
- Office rent (7);
- Effective personal income-tax rate (2)
- Employer's social security contribution (3)
- Total public expenditure on education (3)
- Secondary school enrolment (7)
- Stock market capitalisation (3) and
- Finance and banking regulation (9).

#### **EASE OF DOING BUSINESS (Business Environment/Climate)**

**(COMPARING BUSINESS REGULATIONS FOR DOMESTIC FIRMS IN 189 ECONOMIES World Bank Group Flagship Report 2015 for (2013/2014))**

The aggregate ranking on the ease of doing business benchmarks each economy's performance on the indicators against that of all other economies in the Doing Business sample. While this ranking tells much about the business environment in an economy, it does not tell the whole story. A high ranking does mean that the government has created a regulatory environment conducive to operating a business.

#### **Ease of Doing Business Ranking of South Africa**

- Ease of Doing Business Ranking 43 (Overall)
- Protecting Minority Investors 17
- Paying Taxes 19
- Dealing with Construction Permits 32
- Resolving Insolvencies 39
- Enforcing Contracts 46
- Getting Credit 52
- Starting a Business 61
- Registering Property 97
- Trading Across Borders 100
- Getting Electricity 158

(Source: <http://www.doingbusiness.org/rankings>)

## **4. FOREIGN DIRECT INVESTMENT (FDI)**

### **Definition: What is a 'Foreign Direct Investment - FDI'**

Foreign direct investment (FDI) is an investment made by a company or individual in one country in business interests in another country, in the form of either establishing business operations or acquiring business assets in the other country, such as ownership or controlling interest in a foreign company. Foreign direct investments are distinguished from portfolio investments in which an investor merely purchases equities of foreign-based companies. The key feature of foreign direct investment is that it is an investment made that establishes either effective control of, or at least substantial influence over, the decision making of a foreign business. (Source: <http://www.investopedia.com/terms/f/fdi.asp#ixzz4I3cOUDNW>)

There are various institutions that do research on FDI and publish reports including: the annual World Investment Report by UNCTAD (Free Report), the annual fDi Report on Greenfield Investment 2016 by fDi Intelligence a subsidiary of the Financial Times Ltd, the Annual Africa Investment Report by fDi Intelligence and The Foreign Direct Investment Confidence Index®. Information on FDI to the North West province can be obtained through subscription to fDi Intelligence at a cost of £20,000 British pounds per annum. NWDC research has agreed with Dti that they will supply the information to NWDC.

#### 4.1 The 2015 A.T. Kearney Foreign Direct Investment Confidence Index®

The Foreign Direct Investment Confidence Index®, established in 1998, examines the overarching trends in FDI. The top 25 ranking is a forward-looking analysis of how political, economic, and regulatory changes will likely affect countries' FDI inflows in the coming years and there has been a strong correlation between the rankings and global FDI flows. Countries ranked in the Index have consistently received at least half of global FDI inflows roughly one year after the survey. The latest report indicates that global business leaders are pursuing FDI growth strategies grounded in informed optimism of the medium-term economic outlook. Several major trends emerge from the findings:

- Developed markets reign in the Index. Seven of the top 10 countries on the Index and nearly three-fourths of all countries ranked in the top 25 are developed markets, highlighting how investors are seeking safer ground for new opportunities. Interest in frontier (newly emerging) markets varies drastically by region. American investors are least interested in frontier markets, with 42 percent not invested or seeking to divest.
- Europe sets an all-time record with 15 countries in the top 25. No region has ever dominated the top 25 of the Index like Europe in 2015.
- The United States tops the Index for the third straight year. The United States' lead over second-place China shrank from last year's record-setting margin, but it still leads all countries when it comes to investors' positive macroeconomic outlook. Asia-headquartered companies are the most optimistic about the U.S. economy, with 44 percent predicting GDP growth above 3.6 percent over the next three years.
- China is second for the third straight year. Business executives are carefully watching China for economic growth of around 7 percent, and for signs of a successful transition to a consumption-led economy.
- Asia Pacific have a mixed showing in the Index, with Japan rising to 7th (from 19th last year), and South Korea reentering the Index at 16th after going unranked last year. Australia (10th), India (11th), and Singapore (15th) fall in the rankings but maintain top 20 positions.
- In contrast, investors are more pessimistic about the economies of both the Middle East and North Africa (MENA) and Sub-Saharan Africa, where no countries make this year's rankings.
- Global FDI flows hold steady, but still lag their pre-2009 peak. By next year, two-thirds of companies plan to return.

#### 4.2 Global Investment Trends

The fDi Report on Greenfield Investment 2016 by fDi Intelligence indicates

- In 2015, greenfield FDI continued to show signs of recovery, with capital investment increasing by nearly 8.6% to \$713bn, alongside an increase in job creation by 1% to 1.89 million. However, the number of FDI projects declined 7% to 11,930.
- India was the highest ranked country by capital investment in 2015, with \$63bn-worth of FDI projects announced. Major companies such as Foxconn and SunEdison have agreed to invest in projects valued at \$5bn and \$4bn, respectively, in India.
- The US was the highest ranked destination by FDI projects, recording 1517 FDI projects in 2015.
- Asia-Pacific remained the leading destination for FDI in 2015, with 3883 announced FDI projects bringing in an estimated capital investment of \$320.5bn. The region attracted 45% of all capital investment globally in 2015.

- Western Europe was the leading source region for FDI in 2015. Despite a decline of 9% in project numbers to 5047, the region announced capital investments of \$234.4bn. In total, 42% of FDI projects were sourced from Western Europe.

Key trends in 2015 include:

- The number of FDI projects into Africa in 2015 increased by 6%
- Inward investment into the region consisting of Russia, the Commonwealth of Independent States, and central, eastern and south-eastern Europe was the only region to witness an increase in FDI across project numbers (6%), capital investment (12%) and job creation (13%)
- India replaced China as the top destination for FDI by capital investment following a year of high-value project announcements, specifically across the coal, oil and natural gas and renewable energy sectors (Source: fDi Markets)

World Investment Report by UNCTAD 2016

Key trends in 2015 include

- Recovery in FDI was strong in 2015. Global foreign direct investment (FDI) flows jumped by 38 per cent to \$1.76 trillion, their highest level since the global economic and financial crisis of 2008–2009.
- Part of the growth in FDI was due to corporate reconfigurations. These transactions often involve large movements in the balance of payments but little change in actual operations.
- Looking ahead, FDI flows are expected to decline by 10-15 per cent in 2016, reflecting the fragility of the global economy, persistent weakness of aggregate demand, sluggish growth in some commodity exporting countries, effective policy measures to curb tax inversion deals and a slump in MNE profits.
- Inward FDI flows to developed economies almost doubled to \$962 billion. As a result, developed economies tipped the balance back in their favour with 55 per cent of global FDI, up from 41 per cent in 2014.
- Developing economies saw their FDI inflows reach a new high of \$765 billion, 9 per cent higher than in 2014.
- Outward FDI flows from developed economies jumped by 33 per cent to \$1.1 trillion.
- Primary sector FDI activity decreased, manufacturing increased. A flurry of deals raised the share of manufacturing in cross-border M&As above 50 per cent in 2015.
- Looking ahead, FDI flows are expected to decline by 10-15 per cent in 2016, reflecting the fragility of the global economy, persistent weakness of aggregate demand, sluggish growth in some commodity exporting countries, effective policy measures to curb tax inversion deals and a slump in MNE profits. (Source: UNTAD World Investment Report 2016)

UNCTAD, in its January 2016 Investment Monitor, estimates that global FDI flows increased by 36% in 2015 to \$1700bn. This compares with The fDi Report 2016, which estimates that greenfield capital investment by foreign investors was \$713bn in 2015, an 8.6% increase over the previous year.

However there are different ways of measuring FDI. UNCTAD FDI flows data records all types of FDI, based in most countries on the official OECD definition of FDI, while the fDi Markets data published in this report is based on the announcement of greenfield FDI projects only.

The year-on-year changes in greenfield FDI, published yearly in The fDi Report, has closely tracked that of the official FDI flows data published by UNCTAD. This changed in 2015 due to record levels of M&A, leading to the highest crossborder M&A flows since 2007.

As a result, official FDI flows grew substantially in 2015 by more than one-third. Developed economies, and the US in particular, attracted most of the growth in FDI flows in 2015 largely due to inbound M&As. FDI flows to the US in 2015 reached \$384bn – nearly three times more than FDI flows to China.

While FDI flows emanating from M&As can provide a valuable source of foreign exchange and long-term capital to finance the balance of payments, the economic impact of M&As on the host economy is generally regarded as neutral in terms of the impact on job creation and capital investment; the impact is very much deal specific and depends on what the plans of the foreign investor are for the acquired company – to re-invest and expand or to rationalise or even close down – and if the M&A deal is a successful organisational merger.

The economic impact of greenfield FDI is generally regarded as positive – it is new net capital investment and job creation for the host economy. As published in this report, nearly 2 million jobs were directly created by foreign investors in their new or expanded operations in 2015 based on estimates from fDi Markets. Increased domestic capital investment and job creation through the supply chain and the wealth effect further increases the direct and indirect impact of greenfield FDI.

Greenfield FDI data is critical for economic development, as it will have a direct impact on employment and GDP.

The growth in greenfield FDI by 8.6% in 2015 was therefore very positive for economic development, although nearly all the growth in capital investment and related job creation was in Asia-Pacific, where greenfield FDI increased by more than \$70bn.

The biggest change in greenfield FDI in 2015 was the near **tripling of greenfield FDI into India**, with an estimated \$63bn. In 2015, India was for the first time the leading country in the world for FDI, overtaking the US (which had \$59.6bn of greenfield FDI) and China (\$56.6bn).

The rapid growth of greenfield FDI in India shows that while economic development organisations try to attract FDI for the contribution greenfield FDI can make to employment and GDP, FDI is strongly attracted to high-growth economies. Success breeds success and to attract high volumes of FDI, locations need to create the conditions for strong economic growth and development to take place.

## 4.3 Africa

### Regional Investment Trends in the Middle East and Africa

- FDI into the Middle East and Africa by project numbers increased by 0.6% in 2015
- The United Arab Emirates retained its position as the top FDI destination by project numbers, accounting for 24% of projects
- Bahrain recorded strong inward FDI growth during 2015, entering the top 10 by project numbers for the first time since 2012. It also saw a 143% increase in outbound projects
- Capital investment in Uganda rose to \$4.6bn following a joint investment in the coal, oil and natural gas sector by a Russia based investor

- Africa recorded 156 more FDI projects than the Middle East in 2015, a figure that has widened by 98% compared with 2014. It also continued to dominate job creation with 95,387 more jobs created than in the Middle East
- South Africa was the top African destination for inward FDI by project numbers, continuing a long-term trend
- Saudi Arabia was the top country by capital investment in the Middle East, with \$9.8bn recorded in 2015
- The Middle East and Africa region was responsible for \$59.8bn

### Africa Regional Investment Trends

- FDI flows to Africa fell to \$54 billion in 2015, a decrease of 7 per cent over the previous year.
- An upturn in FDI into North Africa was more than offset by decreasing flows into SubSaharan Africa, especially to West and Central Africa.
- Low commodity prices depressed FDI inflows in natural-resource-based economies. FDI inflows to Africa are expected to increase moderately in 2016 due to liberalization measures and planned privatizations of state-owned enterprises.
- Prospects are that FDI inflows to Africa could return to a growth path in 2016, increasing by an average of 6 per cent to \$55–60 billion.

Figure 12: FDI Inflows and Outflows 2009- 2015

There is a focus shift towards Sustainable Development Goals (SDGs) and an Action Plan for promoting private sector contributions. SDGs are being formulated by the United Nations.

### 4.4 South Africa

South Africa's absence – for the second year running – from the top 25 countries listed in AT Kearney's annual foreign direct investment (FDI) confidence index is suggestive of heightened investor concern about perceived political, policy and regulatory instability. (Source: The 2015 A.T. Kearney Foreign Direct Investment Confidence Index®)

Africa region head Wim Plaizier describes the position as “disturbing” given that three-fourths of the executives surveyed for the latest index, published in early May, report that their companies plan to increase their FDI in the coming three years.

The decline in South Africa and Africa’s ranking, Plaizier asserts, cannot be attributed merely to the plunge in commodities, which he admits is “not helpful”. Instead, investors appear unconvinced about the stability of Africa’s political, legal and regulatory frameworks, which is lowering the continent’s attractiveness, despite supportive macroeconomic and population growth dynamics. “The main reason is that there is a perception of an insecurity of investments,” Plaizier tells Engineering News Online.

However, the absence of Africa and South Africa is also seen as part of a broader trend of investors turning to the perceived safety of developed markets. This stands in stark contrast to 2010, when developing countries comprised around 70% of the index.

To recover, African governments will need to rebuild trust with international investors and convince them that the continent provides not only growth prospects, but also stability.

### ***The Promotion and Protection of Investment Bill***

The Department of Trade and Industry (DTI) is in the process of cancelling a number of bilateral investment treaties, with the aim of replacing this investment regime with the Promotion and Protection of Investment Bill. DTI has come under a great deal of fire for cancelling a number of investment treaties with trade partners such as Germany. But the UNCTAD report revealed that South Africa is just one of a host of nations that is in the process of reviewing its international investment agreements regime and that there was “growing unease with the current functioning of the global international investment agreement regime”. A number of unforeseen outcomes as a result of international investment agreements had been identified. Experience had shown that these agreements “bite” – namely that their protection provisions “can and have been enforced by arbitral tribunals at sometimes huge costs to the state”, according to the report. International investment agreements can also have implications for numerous other areas at all levels of policymaking in countries, limiting the regulatory space of the contracting parties. Concerns have been raised that these limits on regulatory space “go too far, were not properly understood at the point of entry into or are inadequately balanced by safeguards for governments or by obligations on [multinational enterprises]”. (Source: 2015 World Investment Report by the United Nations Conference on Trade and Development (UNCTAD))

(Source: UNTAD World Investment Report 2015)

Between January 2011 and May 2016 a total of 494 FDI projects were recorded. These projects represent a total capital investment of **ZAR372.39 bn** which is an average investment of **ZAR753.41 m** per project. During the period, a total of **74,098 jobs** were created.

**Table 11: FDI Projects recorded for South Africa between January 2011 and May 2016**

Destination State	Projects	CAPEX	Avg. CAPEX	Jobs Created	Avg. Jobs Created	Companies

#### **4.5 North West Province**

The North West Province received 0.80% (4) of all projects (494) in South Africa between 2011 and May 2016. This represents 0.31% (R 1.1 billion) of the capital investment and 0.76% (569 jobs).

#### **North West FDI Projects Detail**

**Table 13: FDI Projects recorded for the North West Province between January 2011 and May 2016**

#	Project Date	Investing Company		Industry Sector	Capital R mil	Jobs
1	June 2015	Anglo American Platinum	South East (UK)	Alternative/Renewable Energy	130.6451622	2
2	April 2015	Syngenta	Switzerland	Food & Tobacco	114.8271381	55
3	Dec 2011	IGE Resources (International Gold Exploration)	Sweden	Minerals	651.468253	383
4	April 2011	Monsanto	Missouri	Food & Tobacco	263.6337355	129

**When comparing the figures in the table above with the figures in the table below it is clear that the North West province has experienced a significant decline in FDI. It is therefore recommended that concerted efforts be made to increase the focus on destination marketing and investment promotion.**

The North West Province received 1.42% (8) of all project (563) in South Africa between 2008 and 2014. This represents 2.07% (R 6 billion) of the capital investment and 4.6% (5 078 jobs).

It must be noted that the information above was sourced from ©fDi Intelligence, from the Financial Times Ltd 2014 and 2016 and that the projects above might not represent all the projects and expansions in the North West province as some projects are reported in other provinces as the head office of the investing companies are located there.

## 5. TRADE

Presenting the contents of the report in Johannesburg, Unctad economist Alex Izurieta said that international trade had slowed as a result of weak global demand. He also argued that demand was unlikely to strengthen materially in the near term, owing to a still weak global recovery. Unctad expects global growth of between 2.5% and 3% in 2014.

The way to expand trade at global level is through a “robust domestic-demand-led output recovery at national level”, rather than through the current emphasis on the cost of trade.

In the report, Unctad outlines a “balanced-growth scenario” premised on: income policies that support growth of demand; growth-enhancing fiscal policies; industrial policies to promote private investment and structural transformation; regulation of finance and capital controls to stabilise global financial markets; and development-orientated trade agreements.

Such policy prescriptions mesh with South Africa’s current deliberations on the introduction of a national minimum wage, as well as using public infrastructure investment programmes to stimulate demand for locally made manufacturing inputs.

However, there is less alignment in the area of trade policy, where South Africa aims to bolster the competitiveness of its tradeables sectors in a bid to materially increase exports, particularly the export of manufactured products.

“It is possible to achieve higher levels of global growth of above 6% to 7% continuously over the next ten years through a coordinated effort to press the accelerator on fiscal support,” Izurieta, who co-authored the report, argues.

Such support would be in the form of higher government spending on infrastructure, raising private-sector investments in productive activities and income policies that help bolster wages and, in so doing, create new demand.

To support such an outcome, Unctad says developing countries should be allowed sufficient “policy space” to pursue proactive trade and industrial policies as part of the Post-2015 Development Agenda, currently under consideration.

It also cautions developing countries not to enter into multilateral and bilateral agreements that will further erode their policy space to protect domestic industries, or to limit government’s ability to maximise the rents they are able to extract from the resources sector. Edited by: Terence Creamer

The following trade statistics were sourced from IHS Global Insight Regional Explorer with regards to trade of South Africa and the North West province.

**Table 15: International Trade Figures for 2015**

## 6. RECOMMENDATIONS

When considering the above it is recommended that attention should be given to the following:

- Diversify the economy of the NW province
- Develop SMMEs
- Adhere to the Five Provincial Concretes as determined by the existing Administration for the period 2015-2020. The five concretes are based on Repositioning Rebranding and Renewal (RRR) of the Bokone Bophirima Province
  - Agriculture, Culture & Tourism (ACT)
  - Villages, Townships, Small Dorpies (VTSD)
  - Reconciliation, Healing and Renewal (RHR)
  - "Saamwerk Saamtrek" Philosophy
  - Setsokotsane Programme
- Contribute to making the nine items of the "Basic Poverty Relief Package" or the essential food basket available within the NWDC mandate. The items include:
  - Bread (Projects like bakeries for communities to be more self reliant when it comes to poverty relief)
  - Oil (Growing or buying sun flowers and making oil locally)
  - Milk (cows and milking facilities)
  - Maize meal
  - Meat
  - Vegetables
  - Fruit

- Water
- Electricity
- Actively seek for opportunities to benefit from the BRICS Fund.
- Develop and diversify the manufacturing sector.
- Identify leakages in the current manufacturing value chains to attract investment as well as investigate global value chains as the new trend.
- Utilise localisation strategies and products identified for local procurement by Eskom and Transnet to link to local suppliers and SMMEs that can benefit from the infrastructure development programmes.
- Increase agricultural activity and agro-processing.
- Contribute to rural development programmes.
- Utilise co-operatives to stimulate these economies.
- Utilise ICT for communication and training purposes
- Include designated groups, youth, women and disabled as beneficiaries of projects.
- The unemployed graduates database and other databases can be consulted for possible beneficiaries.
- Skilling in line with provincial plans is very important and closer co-operation should be encouraged between tertiary institutions and project drivers to be able to develop appropriate skills.
