Re Fentse Environmental Solutions (Pty) Ltd was established on 7 June 2019, by Mr Ofentse Rabaji who is in possession of a Masters of Environmental Management - focusing on Waste

Management. It was the year 2016 when he realised the need to acquire more in-depth knowledge and skills within the Environmental Management discipline. He was fortunate enough to have been part of the National Cleaner Production Centre - South Africa's (NCPC-SA's) 2016 Internship Programme, which focused on equipping young scientists with greener production skills and experience to contribute to industrial sustainability.

Re Fentse Environmental Solutions (Pty) Ltd was established with the primary objective of providing the South African market with a comprehensive perspective to environmental & waste management solutions in offering relatively more sustainable and feasible alternatives to the common 'waste-to-landfilling' approach and other treatment mechanisms.

The company was founded based on the vision of treating waste as a secondary resource and offering a variety of environmental services that address the necessity of sustainable management of our precious restricted resources.

As a Waste Management company, the poor management of waste in our municipalities also played a major role in 'pushing' him to start his own

company. With this done, he can now utilise his skills to assist municipalities accordingly so that they can move towards a greener environment.
